Screenshots

ε-Neighborhood

- ε-Neighborhood – Objects within a radius of ϵ from an object.

$$N_{\epsilon}(p) : \{q \mid d(p,q) \leq \epsilon\}$$

- "High density" - ε-Neighborhood of an object contains at least *MinPts* of objects.

Types of Outliers (II)

- **Collective Outliers**
 - A subset of data objects *collectively* deviate significantly from the whole data set, even if the individual data objects may not be outliers
 - Applications: E.g., *intrusion detection*:
 - Several parameters in blood work

Detection of collective outliers

Consider not only behavior of individual objects, but also that of groups of objects

Need to have the background knowledge on the relationship among data objects, such as a distance or similarity measure on objects.

A data set may have multiple types of outlier

One object may belong to more than one type of outlier
